

FoGD Project work

Boris Simeonov

The game I made is called Mouse Soup. It is a platformer where the goal of the player is to collect as many ingredients for a soup as they can and reach the end without dying. There are three stages total with 6 ingredients in each to be found. There are three unique enemies that can attack the player. The player loses HP when taking damage and gains it back by obtaining ingredients.

The sprites in the game were made by hand by me. The music and sound effects were sourced from <https://opengameart.org/> and <https://freesound.org/> and are in the public domain (CC0). **There is no AI generated material – code or assets in the game. I used AI rarely for code related practical questions and problems.** (it was not very good at that so I mostly got help from tutorials and forums).

There is a repository on github where all the progress can be seen and a windows and linux release versions of the game are available:

<https://github.com/BDSimeonov19/Mouse-Soup>

The main features of the game are:

Feature	Points
The game can be played, it does not crash, the player does not get stuck, etc.	2 – Yes
The game has consistent and coherent visual look	2 - Yes
The music and sound effects are in balance	2 - Yes
The game supports various control options (e.g. keyboard and mouse / touch screen / gamepad)	2 – Yes – keyboard and gamepad
The game has setting screen, where gamer can customize settings (e.g. music and sfx volume)	2 - Yes
The game has dynamic lightning (i.e. the lightning varies on different areas / times of the game)	0 - No

The game has enemies that can be destroyed	2 - Yes
The enemies have “some intelligence” (state machine is enough)	3 - Yes
There are some collectable items in the game (e.g. coins, ammo, guns, starts...)	1 - Yes
The game area is bigger than just one screen	1 - Yes
There are different menu and game scenes	1 - Yes
There are various maps with increasing difficulty	2 - Yes
Gamer can see how fast/good she passes the level/map	1 – Yes
All the settings and game records (high score / TOP10, passed levels, etc) are stored in a save file(s)	2 - Yes
Finishing something (eg. a map) unlocks something else (e.g. another map)	2 – Yes
Game can have multiple players simultaneously (it is enough that they use the same keyboard, think of the old game Pong)	0 - No
Shader effects are used to improve the visual style and immersion	2 – Yes
The game has a real story unfolding while the gamer advances in the game	0 – No
Physics engine is used in innovative way (e.g. there are areas where the gravity changes or some enemies have reversed gravity, etc)	1 – There is a seagull flying enemy which has different AI
Music adapts to game situations (e.g. the health level is lower, music is more intensive)	0 - No
Additional Features:	
The game has a pause menu that can be accessed throughout playing to change settings	1
The game state (the current level and the items collected so far) are saved and can be saved through the pause menu	2
The game has “Coyote time” – a grace period where you can still jump a split second after falling off a ledge	1
